

ROVER CT

MOBILE VETERINARY CT SCANNING

Advanced imaging delivered to your parking lot — no referral needed.

Pet owners want answers fast. Your team wants to keep cases in-house. Rover CT makes both possible.

We bring hospital-grade cone-beam CT directly to your practice — giving you fast, precise, same-day diagnostics without sending clients to a specialty center.

WHY PRACTICES CHOOSE ROVER CT

- **High-resolution 3D CT** — head, neck, spine, joints, thorax, and more
- **Sedation-friendly workflow** — designed for general practice
- **Board-ready images** — for surgeons, neurologists, and radiologists
- **Same-day results available**
- **No capital investment** — no equipment purchase
- **Keep cases in your hospital** — improve care and retain revenue

HOW SCHEDULING WORKS

You choose a block of time — morning, afternoon, or full day. Rover CT arrives on-site and integrates with your workflow. During your block:

1. Your team prepares and sedates patients
2. Our technologist performs the CT scan inside the mobile unit
3. You receive images immediately
4. Add additional cases anytime during your block

This model keeps your day predictable, efficient, and profitable. Rover CT extends your hospital's capabilities — it does not replace them. You remain the attending veterinarian and the medical decision-maker.
